The former world-class technology company DreamWorks Animation has filed for bankruptcy protection after a devastating \$950 million write-off in its production division. The company's multi-platform software division has been moved to the home of its parent, Universal Studios, and its new company name will be DreamWorks Animation SKG, the company announced in a statement today. The company said it expects "significant" job cuts as a result of the "re-engineering" of its operations. Despite the recent slump in the economy, major American cities continue to grow at a breakneck pace, with some cities experiencing much larger increases than the national average. As of the end of December, the population of the United States had grown to 281,672,000 people, representing a growth rate of 1.58 percent. Dallas-Fort Worth, a region that had been slowing down, experienced the fastest population growth of any of the top 15 metros, adding an estimated 62,000 people since the beginning of the year, more than 1.3 percent. Phoenix saw the second largest growth of the top 15, adding an estimated 25,000 residents since the beginning of the year, or a growth rate of 0.81 percent. Chicago, the country's third largest metropolis, experienced a modest population growth, adding an estimated 9,000 new residents, a 0.51 percent growth rate. Los Angeles also saw modest growth, increasing by 5,000 new residents, or a 0.24 percent growth rate. Though the smaller metros continue to play catch-up, the national average is still hovering at a modest increase of 0.5 percent. Through the second half of 2008, the nation's 13 largest metros experienced growth rates ranging from a low of 0.1 percent (Philadelphia) to a high of 4.3 percent (Los Angeles). The U.S. Census Bureau expects population growth to continue at this pace through 2010, adding an estimated 9.9 million people to the country's population. "When I was a kid, I used to dream of moving to Los Angeles to make it as an actor. No more," says Bryan, from Florida. "My daughter, who is in college now, keeps asking me why I keep moving," Bryan says. "She

What's New In AutoCAD?

Automatic Layer Grouping

Automatic hidden and collapsed layer groupings are one of AutoCAD's most useful new features. Let's say you have five buildings. You start drawing the buildings, and then need to add a new building next to the first four. You just can't keep adding to the same layer. With AutoLAYER, you no longer have to. Automatic Layer Grouping I'm sure you've already used it: The new automatic layer grouping feature lets you quickly organize your layers into groups. You'll know that I'm referring to the groups of layers you've already created, not the ones you have yet to create. AutoLAYER groups layers together based on their names.
