[Immunologic processes in burn injuries]. In burn injuries of different etiology, inflammatory mediators may affect the immune response. It has been shown that burn injury results in increased production of PGE₂, IL-6 and IL-10. Moreover, IL-6 modulates the stress hormone secretion pattern and the immunological properties of monocytes. IL-6 is able to stimulate the development of Th17 cells and induce apoptosis of T-cells. IL-6 also has direct effects on the differentiation of T-cells and B-cells. Recent studies have shown that various pro-inflammatory mediators in burn injury could interfere with the differentiation of Th1 and Th2 cells. After thermal injury, there is an acute neutrophilic response, followed by the lymphocytic response. The Th1 and Th2 cells activities are regulated by the cytokine TGF- β , which was produced by macrophages. The difference of Th1 and Th2 cytokine patterns could influence the healing process in burn injury. Therapies targeting the cytokine balance may ameliorate the outcome of wound repair.[Focal mucocoele of the middle ear]. Three middle ear adenomas or adenomatous polyps are presented. They are rare middle ear neoplasms. A 33-year-old woman, a 30-year-old woman and a 27-year-old man with the symptom of conductive hearing loss are described. In the first patient the adenoma was located in the tympanic cavity. The second patient had a pus exudate in the tympanic cavity and the third had a glomus tumor in the tympanic cavity. In the first two patients, the adenomas were excised under a microscope, and in the third patient the lesion was removed by suction and curettage. In the first patient the defect was closed with fibrin glue and in the other two patients it was closed with perichondrium. In none of the three patients a recurrence was observed during a follow-up of 5-6 years. To gain some insight into the structure of the defect in these polycrystalline samples we measured the resistivity as a function of temperature. In Fig. \[fig1\] a log-log plot of the resistivity versus temperature is shown for two values of the magnetic field. For low temperature and high field the data are consistent with the calculated magnetoresistance 3e33713323
