A: After some search I found out that it is an error of mine, and the sorting script is just wrong. Charles H. Cobb Charles H. Cobb (October 27, 1823 – May 12, 1903) was an American businessman and politician from New York. Life He was born on October 27, 1823, in Cohoes, Albany County, New York, the son of Joseph Ruggles Cobb (1793–1837) and Eleanor (Coryell) Cobb (1794–1876). He was a member of the New York State Assembly (Albany Co.) in 1861 and 1862. Cobb was elected Mayor of Cohoes in 1866 and again in 1869 and 1870. In 1871, he was Chairman of the New York State Republican Committee. On May 12, 1903, he died in Cohoes, New York. He was buried at the Oakwood Cemetery there.

Family On November 30, 1845, he married Alice Cochrane Warren (1823–1897), the daughter of Joseph Warren and Catharine (Townsend) Warren. She was the granddaughter of Joseph Warren, the president of Bank of North America. They had five children: Joseph Warren Cobb (1847–1925), Alice, Charles Cochrane (1856–1923), Bronson (1862–1883), and James (b. 1875). Sources Political Graveyard The Mayors of Cohoes in NYT on November 17, 1903 Category:1823 births Category:1903 deaths Category:Members of the New York State Assembly Category>New York (state) Republicans Category:Politicians from Cohoes, New York Category:19th-century American politicians Category:People from Albany County, New YorkUsing an onerous dataset of clinical information from The Health Improvement Network (THIN), this paper uses hidden Markov models (HMMs) to examine the adverse drug reaction (ADR) profiles of tamsulosin and alfuzosin. The authors compare the relative contributions of clinically important characteristics (e.g. patient age) with the likelihood of experiencing an ADR associated with these drugs. The authors estimate the probabilities of experiencing possible ADRs associated with using these drugs.Jingjinjian dialect Jingjinjian () is a Western Min dialect spoken in Jingjinjian County, Wuxuan, Chongq

Fisica Preuniversitaria Paul Tipler Pdf 15

The main purpose of this report is to provide new and useful information about the century-long struggle to define the quantum-mechanical behavior of particles and to establish the necessary probabilistic and mathematical foundations of the theory. However, in order to carry out these tasks, a precise definition of the word "elementary" is required. To a large extent the success of this approach is due to the fact that the physical attributes of the universe in which we live are not only of an elementary nature (e. g., there is no gravitation). Particles indeed have mass but then, the theory does not contain this very notion, being formulated in terms of the concepts of momentum and energy. Quarks and gluons are elementary, but they are the constituents of the proton or neutron, not of the physical system containing them. The main point is that the universe does not consist of particles and is not simple, neither is it entirely "primitive" and "elementary", as the founders of quantum mechanics (Born, Heisenberg, etc.) believed. The existence of elementary physical entities, the elementary constituents of the universe, is taken for granted, and its necessary consequences are explored in the present work. For each of the two basic notions, the notion of elementary and the elementary constituents of the universe, the definition given in the introduction to this work is the only one that has always been universally accepted. The elementary constituents are not elementary entities; not even quarks or gluons. Yet there are five basic constituents, which form the basis of quantum mechanics as a universal theory. Yet no elementary theory of quarks exists; this must be constructed on a mathematical basis. The first attempt to construct such a theory is presented in this work; it has been developed together with the first author since 1980. This work is based on the well-developed theory of elementary particles in QCD (quantum chromodynamics). This theory's mathematical foundations are very solid and trustworthy, and they have guided us during the last 25 years towards a rather complete solution of the construction problem. The old 60s definition of the elementary constituents of the universe as elementary entities is still accepted in many circles. In spite of the fact that the quantum-mechanical theory of elementary particles, formulated in three basic decades, has been constructed, and it has been shown that a fundamental theory based on the very elementary particles it treats of can be formulated, this old definition is not adequate. This work is an attempt to elaborate the theoretical foundation for the elementary constituents 3e33713323
