-Transfer PDF to iPad/iPhone/Android smartphone/Tablet/Windows phone 8 - Convert PPT to iPad/iPhone/Android smartphone/Tablet - Free app download, no cost and no registration - 100% safe

PatientDB Free

PatientDB is the all-in-one solution for medical clinics, doctors' offices and long-term patients. PatientDB is not a standalone application - it comes bundled with basic functions of a clinic, such as patient profile,

medical notes, medications, appointments, billing, patient record, medical imaging, tests and reports. It is a completely integrated solution, by means of which you will never have to search for the patient or doctor again. For doctors, PatientDB saves time and minimizes errors. It's simple to use and has a user-friendly interface. For patients, it's a convenient means of remembering information about a doctor, their medications and tests, even taking notes. When you register the application, you will get two personal IDs, one for yourself (i.e. your "main") and one for your doctor (i.e. your "ex"). They will come in handy when you need to search for people, in order to avoid a mix-up. Besides that, you get a separate place for medical suppliers, where you can input their information - and it's also possible to

make a payment if your patient has been treated with a provider and then goes to the pharmacy. With PatientDB you will never lose any information, especially the most crucial details, which include doctor, medical test, medical supply, drugs, treatment, patient record, history and medical note. PatientDB Free

Improve your business with personalized tracking and immediate notifications! Inaccuracies with your Patient Billing Software could result in financial losses, and make for an unproductive operation. There are many reasons why inaccurate records should be handled immediately. Use PatientDB to track your patient's data more efficiently and quickly. This information will help you improve your efficiency. If you wish to receive notifications about your patients' data, then you need to

connect the application with your e-mail system and begin downloading patient records. PatientDB is built with an advanced relationship between the database and e-mail. You can select from one of many email templates, and it will automatically send any changes made to PatientDB. For more information, please visit our website at www.patientdb.com or www.patientdb.biz. PatientDB Free

What's New in the?

Developed by a startup with the vision to revolutionize the healthcare industry by building a true patient-

centric app, which offers the best healthcare experience for patients. This mobile app enables doctors, nurses and patients to work together seamlessly to create a perfect medical experience. PatientDB is a modern, intuitive patient record software. It has been designed to offer a number of useful features to medical businesses and professionals. The application is packed with much more features than those of similar products on the market, while being much more comprehensive. You can use this application to manage patients' records, maintain patient histories, and file details of medical procedures and treatments as well as prescribe medication and insurance. It is a user-friendly, intuitive and easy-to-learn program that comes in handy especially for doctors' offices, small clinics and hospitals to easily

keep track of multiple patients, their appointments, drug and medical files, and surgeries and consultations. Most importantly, it offers great functionality to help doctors collect, manage and store detailed patient records, including medical charts, laboratory reports, MRI scans and other detailed files in a place that they can access anytime and anywhere. It allows to schedule appointments, generate reports and generate summary reports to check patients' status. Finally, this is a feature-rich application that allows users to take notes, enter and update medications, surgeries and appointments, manage medical records, and access medical details of their individual patients and their medical history. System Requirements: Worked on iOS Main features include: • Intuitive and easy-to-use User interface • Rich feature

list • Generate summary reports to check patients' status • Monitor medications, visits, lab reports and medical records • Maintain patient histories • Understand personalized treatment • Generate and view reports • Provide in-depth data about a patient's history, medical tests and treatment • Capture, store and view videos as well as images of your body • Upload scanned photos of your body • Enter appointments and share schedules with others • Record your observations, observations, physical examinations and find out • Manage medications • Manage patients' reviews, complaints and medication issues • Generate and upload files • Schedule appointments for patients and be notified of appointments from your smartphone • View or add appointments, medications and test results • Maintain medical

record • View file details of
different activities • Track
information about devices,
instruments, surgeries, operations
and clinical
