You can use the Mariner pen tool to trace drawings and pictures or to make selections. If you create graphics for the Web, you might want to use the Type tool, which allows you to apply type effects to text in your image. In this chapter, we show you how to access and use Photoshop's brushes, tools, and effects. You also discover how to use the Enhance mode to sharpen an image. Understanding Layer Masks After you create a document in Photoshop, you're ready to start editing it. To do so, you create a document or start up Photoshop from scratch. Figure 11-1 shows you how to create a new image. **Figure 11-1:** You can start from scratch or load a previously created file. The first tool you use after you create a new document is the Layers window. The Layers window displays the current state of your Photoshop document, as shown in Figure 11-2. In this image, the painting canvas has been created, but the background and foreground colors haven't yet been defined. In Figure 11-2, the layers, which are displayed as a dark line, contain four basic items: The Selection tool contains the image you're working on. The Background layer contains the top layer, which is selected to contain the items you add to your image. The Foreground layer is visible in the bottom half of the Layers window and contains the items you add to the canvas. The blending and composite layers, which we don't show in Figure 11-2, are used to create the final image. **Figure 11-2:** The Layers window displays the items currently contained in the document. If the Selection tool is active, the current image is selected to contain the items added to your document. When you're working in the Layers window, you can select an item and move it up and down the list, as shown in Figure 11-3, to move the item up or down in the Layers window. To add an item, right-click and choose the Add Layer command. To remove an item, right-click and choose the Remove Layer command. **Figure 11-3:** Choose a layer by clicking an item and dragging it up or down. To delete or hide a layer, right-click and choose the Delete or Hide Layer commands. If you want to edit a layer, you can double

What's New in the?

Clinical manifestations, MR imaging findings, and surgical management of isolated unilateral posterior fossa lipoma. Isolated lipomas in the posterior fossa are extremely rare, and only 11 cases have been reported to date. Those accompanied by lipomyelomeningocele are often associated with cranial nerve dysfunction. To describe clinical manifestations, MR imaging features, and surgical outcome of 9 pediatric patients with isolated posterior fossa lipoma. Clinical, neuroradiologic, surgical, and follow-up records of 9 patients with isolated posterior fossa lipoma were retrospectively reviewed. Nine patients (5 boys and 4 girls; mean age at operation, 10.3 years) underwent 12 surgical procedures (8 suboccipital-transcondylar, 3 suboccipital-pericoronal). Preoperative symptoms included ataxia, dizziness, and paresthesia, which were found in 7, 3, and 3 patients, respectively. MR imaging revealed intraoperative sonographic findings in all cases. Lipomatous tumors appeared as mainly isointense to hyperintense on T1-weighted (T1W) images and hyperintense on T2-weighted (T2W) images. All lesions were completely resected during surgery and did not recur. Lipomas in the posterior fossa are usually asymptomatic and may be detected incidentally on MR imaging.Q: How to check WebResource.axd request parameter for loadstatechange event without reload? I'm trying to detect a loadstatechange event from a WebResource.axd request. I'm using AJAX control toolkit to generate the AjaxControlToolkit.dll. I've read about this post on msdn: And I've tried the suggestion there: protected override void OnLoad(EventArgs e) { base.OnLoad(e); try { if (IsPostBack) { // event fired on page load
