In addition to being extremely slow, it looks like it's only processing the last line of the file, or possibly the end of the input stream. This is what I've done: func
printOutFile(fileName: String) { print(fileName) if
FileManager.default.fileExists(atPath: fileName) { do { try
FileManager.default.removeItem(at: fileName) } catch { print("File cannot be
removed") } } let fileManager = FileManager.default let url = URL(fileURLWithPath:
fileName) do { let documentsPath = try
fileManager.URLsForDirectory(.documentDirectory, inDomains:.userDomainMask).first
let filePath = documentsPath.appendingPathComponent(fileName) try
fileManager.copyItem(at: url, to: filePath) } catch { print(error) } } A: Change your
loop to: for line in contentsOfFile { //convert string to nsstring let parsedString = line
as! NSString // add to array if let _ = messageArray.insert(parsedString as String, at:
[IndexPath](messageArray.count)) { messageArray.insert(parsedString, at:
[IndexPath](messageArray.count)) } else { messageArray.append(parsedString) } } It
might not be pretty but I don't think you are using a regular expression. The important
thing is to have the loop
