FIFA 22 introduces “Impact Engine 2,” which uses a refined, enhanced version of Impact 2, the engine in previous games that enabled the physics of players, the ball, and the pitch to interact with each other. This new version combines physics with face and body intelligence to give players an improved ability to react and perform more natural movements. “In addition to creating true-to-life sensations, we’ve been looking closely at how a player’s movement could feel through their environment, allowing players to react more dynamically and controlling how the ball transfers from one player to another,” says lead gameplay developer Wolfgang Smith. “The design team also gives players the tools they need to dictate play, completing passes and dribbling around the opposition at the most natural angles.” “In soccer, you need to be able to adjust your game plan based on what you see happening on the pitch. This means anticipating moves and thinking one step ahead of the opposition. The more tools the game gives you, the more players can express themselves and their game.” New camera angles and cuts add a level of detail and cinematic flair, while the way players are presented to the camera has been improved, and the animations on the pitch have been made more authentic to real football. For the first time, the player and ball are rendered in real time, which has led to smoother visuals, and in-game weather effects. So, what does all of that mean? Better control of a game that could be turned off at any time by the player. Better football—Bigger variety in styles of play. Better camera angles and better visuals. Smoother gameplay—Better tackling mechanics and better animations. Smarter gameplay—Players can dictate the flow of the game more than ever before. Great cover mechanics—There are nine new cover options. The world’s most authentic soccer experience is back. Key Features: FIFA 22 delivers a fully integrated experience with the Seasons Journey (SJ) Mode, offering a deeper, richer gameplay experience.
