Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

They changed the interface a little bit in the latest Photoshop release. Looks much prettier to me. It's still a "Windows" kind of interface (doesn't start up on Windows RT, for one thing). But if you can get past that, it's a pretty obvious upgrade. ...or no. If you have a network drive share available, save the jpeg preview in a location that is available to all the editors. At the very least, such a network share avoids all of the headaches created by overlapping file versions. In the box above, the "Relative to this image:" drop-down list is for you to indicate the reference image for any versioned file. At the top the box says "workflow management", which interrupts the naming and versioning of files. At a minimum, it should say "versioning and tagging" instead. It's worth considering. I've tried Lightroom on my iOS devices for a while and it's pretty solid, in terms of performance and importation. But there's one glaring absence: No way to access your ~/Dropbox. I'm not sure if that's a support issue or a licensing one. There's no indication of the latter, since Dropbox is free. I haven't used Lightroom on iOS as a primary app, but it functions well on the iPad. I have used Lightroom for some capturing and editing of photos from my iPhone and it works great. My biggest complaint is that it can't handle Lightroom's preference-based files very well. It can't handle versions correctly, it can't accommodate grouped/sliced images, it can't archive inline with the file name, etc. Eventually I migrated all of my Lightroom preference data from my PC to the iPhone and iPad and use that combined data set for editing on the go.
